

A History of Discoveries at Halicarnassus, Cnidus & Branchidae

This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1863 edition. Excerpt: ... The tower, which stands at the south-cast angle, is composed of three stories, the two lower ones of which were dungeons, approached, as is the case in most of the castles of the 14th century, by oeillets in the vaults above them. The floor of the lowest must have been about 50 below the level of the ramparts of the castle. A more melancholy place of confinement can hardly be imagined. The upper story forms a refectory. The floor of this apartment is on a level with the rampart, which here is not more than three feet above the general level of the ground. It has a waggon-headed vault, and is lighted by three deeply embrasured windows, with semicircular heads internally, and square heads outside. In a reveal of a window on the west side is the door of a staircase in the thickness of the wall. This leads to an upper apartment, probably a dormitory. The corbels which supported the floor of this room still remain at the springing of the vault. The walls throughout are 6 3 thick. This tower was erected by Englishmen, whose shields are seen in a row over the door, twenty-three in number, with the following bearings:--The arms of England with a crest upon a mantled helm above the shield; three other shields have the same charge with differences; on the rest are the arms of Montague, Stafford, De Vere, and other English families.0 The national character of the n The sides of the windows in this refectory are covered with names of knights and armorial bearings, carefully cut in the stones by those who kept watch and ward in this castle. Many of these names are Spanish. Facsimiles of all these inscriptions were executed by Corporal Spackman. For the identification of these

coats, see note at the end of this Appendix.
