

# Aviation and Climate Change: Lessons for European Policy (Routledge Studies in Physical Geography and Environment)

It is generally accepted that the US administration expected - that the emissions reduction targets agreed in the Kyoto Protocol are only the beginning of what needs to be achieved in international climate negotiations. While studies suggest that major emission reductions by industrialized countries can be achieved at low economic cost, both these and early reductions by developing countries are inevitably a major political challenge. This book focuses on European policy toward climate change, specifically its ramifications for the aviation industry. With air travel predicted to grow enormously in the coming years, the issue of climate change is hugely topical for this important industry. Accessible to students, academics and practitioners, this book is useful reading for all those with an interest in climate change, the aviation industry, or both.
