

The Fenland Project No.9: Flandrian Environmental Change in Fenland ^D (East Anglian Archaeology)

Aby Martyn Waller Volume Number 9 from the Fenland Project details the results from the palaeoenvironmental programme completed between 1983 and 1989. It contains the database and reconstructions of past environmental conditions derived from the study of the recent (Flandrian) deposits of Fenland, and helps place the archaeological sites discovered by the field survey within their contemporary landscape. The first part of the book discusses previous studies and methodology, interpretative models and data synthesis, pollen analysis and radiocarbon dating, whilst the second contains details of the stratigraphic information collected from over 40 sites in the Fenland.
